World Health Organization (WHO) Reversal on Baby COVID vaccine

Douglas C. Youvan

March 28, 2023

I am not anti-vax. There are some good ones. My blood is boiling over this news. I've already made one (lawful) threat to my doc in the last hour to resign as her patient if their institution continues to C0VID vax children. The US gov response to this, with some probability, is to start another hiatus. Possibly, fire a few shots at Chinese ships near the Philippines. The problem is, most people think of themselves first, and if they don't perceive a direct threat to themselves (or their shopping), they will do nothing. BTW, that kind of thinking justifies the elites' concept of us as just "eaters".
